a. Search the app store and find any applications that might complete with your app and figure out ways you can make your app better than those.

    BGG, Board Game Stats, Board Game Bible, and Meepster. All of these apps have user accounts, board games, reviews and comments. My app will be better by offering information on public local places to play board games. My app will offer a GPS function that will allow a person to share their location, the game they are playing and how many people they are looking to join the game. The users that want to join the game will let the person know and once there are enough players the person that posted the GPS invite can remove it.

b. Who is the general audience the app will be for? This can be a demographic, people working in a certain industry or any description of a group that'll use your app. Try to be specific.

    My app will focus on finding local (Boise, Meridian, Nampa, and Caldwell) people to play board games with in public places. This app will focus on getting local people interested in playing board games and help other people find new board games they would like. There will be board game reviews and information about local places to play board games. There will be accounts for people and people will be able to add friends that they like to play board games and be able to block people they don't want to play board games with.

c. What's the app's main feature and which mobile technologies it will require (GPS, camera, database, Bluetooth, internet, etc)?

    The main focus of this app will be able to find local people to play board games with and review board games. The technology it will require GPS, internet, database and maybe the camera. The GPS to find people to play board games with. The internet for the GPS and board games with reviews. The database to hold user accounts and passwords, pictures, board games, reviews and comments. Maybe the camera to take pictures for the user profiles.

d. What price would you set the app at?

    I wouldn't charge for this app. I am new to making apps and this app won't be very good. This app is more for experience than it is for money.
